SCALE FOR PROJECT PYTHON MODULE 00 (/PROJECTS/PYTHON-MODULE-00)

You should evaluate 1 student in this team

Git repository

git@vogsphere.42porto.com:vogsphere/intra-uuid-ee38855c-9db2-4f98-90:

Introduction

- Remain polite, courteous, respectful and constructive throughout the evaluation process. The well-being of the community depends on it.
- Identify with the person (or the group) evaluated the eventual dysfunctions of the work. Take the time to discuss and debate the problems you have identified.
- You must consider that there might be some difference in how your peers might have understood the project's instructions and the scope of its functionalities. Always keep an open mind and grade him/her as honestly as possible. The pedagogy is valid only and only if peer-evaluation is conducted seriously.

Guidelines

- Only grade the work that is in the student or group's GiT repository.
- Double-check that the GiT repository belongs to the student or the group. Ensure that the work is for the relevant project and also check that "git clone" is used in an empty folder.
- Check carefully that no malicious aliases was used to fool you and make you evaluate something other than the content of the official repository.
- To avoid any surprises, carefully check that both the evaluating and the evaluated students have reviewed the possible scripts used to facilitate the grading.
- If the evaluating student has not completed that particular project yet, it is mandatory for this student to read the entire subject prior to starting the defence.
- Use the flags available on this scale to signal an empty repository, non-functioning program, a norm error, cheating etc. In these cases, the grading is over and the final grade is 0 (or -42 in case of cheating). However, with the exception of cheating, you are encouraged to continue to discuss your work (even if you have not finished it) in order to identify any issues that may have caused this failure and avoid repeating the same mistake in the future.
- Remember that for the duration of the defence, no segfault, no other unexpected, premature, uncontrolled or unexpected

termination of the program, else the final grade is 0. Use the appropriate flag.

You should never have to edit any file except the configuration file if it exists.

If you want to edit a file, take the time to explicit the reasons with the evaluated student and make sure both of you are okay with this.

- You must also verify the absence of memory leaks. Any memory allocated on the heap must be properly freed before the end of execution.

You are allowed to use any of the different tools available on the computer, such as leaks, valgrind, or e_fence. In case of memory leaks, tick the appropriate flag.

Preliminaries

basics

The review is done in the presence of the reviewed learner. This is how everyone progresses: by interacting with others.

- No report: 0, the review is over.
- As soon as an exercise is non-functional, the review stops. You can look at the code of the following exercises, but they will not be graded.

 Yes

 No

Exercises

Exercise 00 - ft_hello_garden

- Verify the file contains a function named ft_hello_garden() (not a main program).
- Run the function and verify it outputs exactly "Hello, Garden Community!".
- Check that the function takes no parameters.
- Verify the function uses print() to display the message.
- Ensure the file is in the ex0/ directory.

 Yes

 No

Exercise 01 - ft_plot_area

- Verify the file contains a function named ft_plot_area() (not a main program).
- Run the function and test with different inputs like length=10, width=5 (should output "Plot area: 50").
- Test with length=7, width=3 (should output "Plot area: 21").
- Test with length=1, width=1 (should output "Plot area: 1").
- Verify the function correctly calculates area using multiplication.
- Check that the output format matches exactly "Plot area: X".
- Ensure the file is in the ex1/ directory.

 Yes

 No

Exercise 02 - ft_harvest_total

- Verify the file contains a function named ft_harvest_total() (not a main program).
- Test with inputs like day1=5, day2=8, day3=3 (should output "Total harvest: 16").

- Test with day1=10, day2=0, day3=5 (should output "Total harvest: 15").
- Test with all zeros: day1=0, day2=0, day3=0 (should output "Total harvest: 0").
- Verify the function correctly adds the three values.
- Check that the output format matches exactly "Total harvest: X".
- Ensure the file is in the ex2/ directory.

☒ Yes☐ No

Exercise 03 - ft_plant_age

- Verify the file contains a function named ft_plant_age() (not a main program).
- Test with age=75 (should output "Plant is ready to harvest!").
- Test with age=60 (should output "Plant needs more time to grow.").
- Test with age=61 (should output "Plant is ready to harvest!").
- Test with age=30 (should output "Plant needs more time to grow.").
- Verify the condition correctly uses > 60 (not >= 60).
- Ensure the file is in the ex3/ directory.

☒ Yes☐ No

Exercise 04 - ft_water_reminder

- Verify the file contains a function named ft_water_reminder() (not a main program).
- Test with days=4 (should output "Water the plants!").
- Test with days=2 (should output "Plants are fine").
- Test with days=3 (should output "Water the plants!").
- Test with days=1 (should output "Plants are fine").
- Verify the condition correctly uses > 2 (not >= 2).
- Ensure the file is in the ex4/ directory.

☒ Yes☐ No

Exercise 05 - ft_count_harvest (Iterative)

- Verify the file ft_count_harvest_iterative.py exists in the ex5/ directory.
- Verify it contains a function named ft_count_harvest_iterative() (not a main program).
- Test with days=5 (should output "Day 1", "Day 2", "Day 3", "Day 4", "Day 5", "Harvest time!").
- Test with days=1 (should output "Day 1", "Harvest time!").
- Test with days=3 and verify it counts from 1 to 3 correctly.
- Verify the function uses an iterative approach (for loop or while loop).
- Check that "Harvest time!" appears at the end.

☒ Yes☐ No

Exercise 05 - ft_count_harvest (Recursive)

- Verify the file ft_count_harvest_recursive.py exists in the ex5/ directory.
- Verify it contains a function named ft_count_harvest_recursive() (not a main program).
- Test with days=5 (should output "Day 1", "Day 2", "Day 3", "Day 4", "Day 5", "Harvest time!").
- Test with days=1 (should output "Day 1", "Harvest time!").
- Test with days=3 and verify it counts from 1 to 3 correctly.
- Verify the function uses a recursive approach (function calls itself or uses a helper function).
- IMPORTANT: Accept various recursive implementations including: nested helper functions, default parameter values, or separate helper functions called by the main function.
- Check that "Harvest time!" appears at the end.
- Both iterative and recursive versions should produce identical output.

☒ Yes☐ No

Exercise 06 - ft_garden_summary

- Verify the file contains a function named `ft_garden_summary()` (not a main program).
- Test with `garden_name="Community Garden"`, `num_plants=25`.
- Test with `garden_name="My Garden"`, `num_plants=10`.
- Verify it correctly displays "Garden: [name]".
- Verify it correctly displays "Plants: [number]".
- Verify it displays "Status: Growing well!" exactly.
- Check that string formatting works correctly.
- Ensure the file is in the `ex6/` directory.

☒ Yes☐ No

Exercise 07 - ft_seed_inventory

- Verify the file contains a function named `ft_seed_inventory()` (not a main program).
- Check that the function uses proper type annotations: `ft_seed_inventory (seed_type: str, quantity: int, unit: str) -> None`.
- Test with `seed_type="tomato"`, `quantity=15`, `unit="packets"` (should output "Tomato seeds: 15 packets available").
- Test with `seed_type="carrot"`, `quantity=8`, `unit="grams"` (should output "Carrot seeds: 8 grams total").
- Test with `seed_type="lettuce"`, `quantity=12`, `unit="area"` (should output "Lettuce seeds: covers 12 square meters").
- Test with an unknown unit like "unknown" (should output "Unknown unit type").
- Verify the function correctly capitalizes the seed type in output.
- Ensure the file is in the `ex7/` directory.

☒ Yes☐ No

Code Quality

Code Quality & Standards

Code Quality Standards Check:

- Run 'flake8' on all Python files in the submission. Are there any flake8 errors or warnings?
- Verify that all functions have proper type hints for parameters and return values (as demonstrated in ex7).
- Check that the code follows PEP 8 style guidelines.
- Note: Docstrings are NOT required for this module.

If there are flake8 errors or missing type hints, the exercise fails.

☒ Yes☐ No

General Code Quality

Code Quality Assessment:

- Are all functions properly defined with correct names (`ft_hello_garden`, `ft_plot_area`, `ft_harvest_total`, `ft_seed_inventory`, etc.)?
- Is the code readable and well-structured?
- Do the solutions demonstrate the intended Python concepts?
- Are files in the correct directories (`ex0/`, `ex1/`, `ex2/`, `ex3/`, `ex4/`, `ex5/`, `ex6/`, `ex7/`)?
- IMPORTANT: Each exercise should contain ONLY a function, not a main program.

☒ Yes☐ No

Ratings

Don't forget to check the flag corresponding to the defense

✓ Ok

★ Outstanding project

Empty work

 Incomplete work

 Invalid compilation

 Norme

 Cheat

 Crash

 Concerning situation

 Leaks

 Forbidden function

 Can't support / explain code

Conclusion
